Workshop A.5

Humanistic Approach in Education and the Question of AI - Learner Agency in Social Sciences

Hamid Asiayee

(Fakultät für Wirtschafts- und Sozialwissenschaften, Hochschule Osnabrück)

Abstract:

The excitement sparked by the emergence of AI open platforms has encountered significant scrutiny from educators and educational planners, who have raised valid concerns about issues such as plagiarism, testing protocols, and the authenticity of content submitted by students. While these concerns are timely and crucial, it's essential not to overlook other pressing issues that often go unnoticed in the lived educational experience of learners, particularly within the field of social sciences. This workshop aims to advocate for a humanistic approach with a focus on education in the generative AI Era.
